

The Sun is NOT . . .

1. A mass of incandescent gas
2. A gigantic nuclear furnace
3. A miasma of incandescent plasma
4. converting hydrogen to helium at temperatures of millions of degrees

“gas” - a state of matter which is a compressible fluid consisting of electrically neutral particles, such as H<sub>2</sub>, O<sub>2</sub>, N<sub>2</sub>, He, or even H<sub>2</sub>O.

“plasma” - a state of matter consisting of partially or totally ionized gas or electrically charged particles

“incandescent” - emitting light as a result of being heated

“miasma” - a noxious atmosphere or influence
